

BendPro™ — Concept Handoff Overview

What BendPro™ Is

BendPro™ is a visual measurement and bend-planning system for trim professionals. It turns real-world openings into clear, shop-ready bend sequences so metal is bent correctly the first time. It is not design software or CAD. It is an execution system designed to create a single source of truth between the field and the shop.

The Core Problem It Solves

Most trim mistakes don't come from lack of skill. They come from miscommunication and mental overload. Measurements are taken under pressure, notes are written fast, and intent is interpreted later by someone else. Shops have plenty of brakes and tools, but no shared execution language. As crews scale, inconsistency increases.

The Key Insight

By capturing intent visually, confirming dimensions, and locking bend logic before execution, the brake operator no longer has to interpret intent. BendPro™ doesn't replace skill — it protects it.

What the Product Does

BendPro™ follows a simple workflow: capture the opening, confirm dimensions, translate into a bend sequence, display shop-ready instructions, and execute at the brake without interpretation.

Dual Adoption Strategy

Path A uses smartphone photos and a printed marker for fast, bottom-up adoption by individual pros and small crews. Path B uses LiDAR and a cloud workspace for team-wide standardization and company licensing. These are two paths into the same system.

Who It's For

Users include trim professionals, crew members, and shop operators. Buyers include owner-operators, trim companies, and contractors managing multiple crews. The user bends the metal; the buyer owns the outcome.

Why This Is Defensible

BendPro™ is grounded in deep domain knowledge, focuses on execution rather than design, and creates switching costs as teams standardize their workflows.

Why Now

LiDAR is now common in mainstream devices, mobile workflows are proven on jobsites, labor shortages increase the need for faster training, and shops need consistency more than heroics.

What Success Looks Like

Reduced rework, faster shop output, easier onboarding, and tribal knowledge becoming institutional knowledge. Same bend. Every time. Every crew.

Current Direction

We are exploring early strategic partners, angel investment, licensing with tool manufacturers, and long-term acquisition paths with a disciplined, non-hype approach.

One-Line Summary

BendPro™ is building the execution standard for trim — connecting field intent to shop reality, visually and reliably.
